## Funded by

PHOTONICS PUBLIC PRIVATE PARTNERSHIP

This project has received funding from the European Union Horizon Europe research and innovation program under grant agreement No 101135838

## In collaboration with

# Experience Milan

Host.

Ephos

## Description.

Ephos is a deep-tech startup designing and manufacturing glass-based optical chips that power AI data centers and quantum technologies. By building photonic circuits in glass rather than silicon, Ephos maximizes energy efficiency and enables unique three-dimensional architectures, allowing customers to scale advanced computing systems to unprecedented levels. Leveraging a proprietary femtosecond laser writing process, the company controls the full manufacturing stack. Ephos produces its chips in

Fab-1, its production facility in the Milan Innovation District (MIND), inaugurated in September 2024. The company is now opening its Fab to selected visitors, who have the opportunity to explore integrated photonic circuits and life inside a deep-tech manufacturing environment.

## Program

### 25 March, 2026

**17:30-18:00 Introduction**

Company overview and presentation of career opportunities at Ephos

**18:00-18:30 Visiting Ephos**

Guided tour of Fab-1 production facility

**18:30-20:30 Networking session**

Aperitivo and informal discussions (including Q&A)

Organized by

POLITECNICO  
MILANO 1863
